What is ScopeOut®?

ScopeOut® is a system of specially designed mirrors in an aerodynamic, high-tech design, which are placed at specific points on automobiles or SUVs to offer drivers a more complete view when backing out of a parking spot, driveway or garage. The ScopeOut® mirrors are particularly helpful for drivers who are parked between large vehicles and have their vision obscured on both or either side. ScopeOut® also protects against lane change blind spots, which contribute to thousands of deadly accidents each year.

What Are the Benefits of ScopeOut®?

Whether driving in traffic or backing out, ScopeOut® offers drivers added protection from potential dangers hidden by their vehicles' blind spots. Drivers with the ScopeOut® mirrors are able to look into the rear-view mirror to the mounted ScopeOut® mirrors and see oncoming traffic and pedestrians, including small children, before backing out.
